Zaporizhzhya National University

Foreign trade plays an important role in the Ukrainian economy. Our country has all the necessary resources for efficient agricultural management. But how efficient Ukraine manages resources is the main issue.

The authors analyze the commodity-geographical structure of Ukraine's exports in the article. The main types of agricultural products with the largest share in total exports are considered too. The dynamics of changes in the number and structure of Ukrainian exports from 2002 to 2017 is analyzed.

The share of agricultural products in the general export is also investigated. Proceeding from this it should be noted that the basis of agricultural exports is the export of raw materials, namely, products of plant origin – wheat, maize, barley and soybeans. The geographical

structure of Ukrainian exports is shown on the chart. For Ukraine, the priority direction of export expansion remains the European Union.

The main reasons for the increase and decrease in exports of agricultural products are shown. The consequences of the expansion of European integration and the introduction of a free trade zone were determined. The article is devoted to the restrictions, quotas and barriers to increasing exports. The problems of agriculture in Ukraine are considered. The author is convinced of how to solve these problems by changes in general approaches in the policy of international relations, changes in the areas of cooperation, improvement of infrastructure and logistics, compliance with international standards and norms in the production, packaging and delivery of goods.
