of Enterprise and Management,
Simon Kuznets Kharkiv National University of Economics

Pavluk K.V.

Student,
Simon Kuznets Kharkiv National University of Economics

In the modern world, innovations play an important role both in the development of individual economic entities and in the development of the country as a whole. Now in Ukraine there are many problems associated with innovation. Thus, the issues of innovative development in the country remains extremely relevant, since the activation of innovative activity could be a key factor in ensuring the development of enterprises through the introduction of new technologies, increasing the competitiveness of products and increasing the efficiency of activities.

Quantify the innovative development of Ukraine is possible in the Global Innovation Index (Global Innovation Index), which is Cornell University, INSEAD school of business and the world intellectual property organization. The development of innovative activity is taking place in Ukraine today, but there are a number of fac-

tors that constrain it: lack of financial resources, lack of innovation market infrastructure, legislative problems, low level of interaction between science and business etc. The process of developing a system of methods to stimulate innovation remains a topical issue.

In order to find ways to stimulate innovation in Ukraine, it would be advisable to consider the experience of other countries. On the basis of the experience of highly developed countries, taking into account the peculiarities of the national economy it can be developed effective tools to enhance innovation in Ukraine. These instruments should cover the financing of innovation, the development of innovation infrastructure, the improvement of legislation, the stimulation of interaction between science and business, etc. And then the successful implementation of innovative activities will become a powerful factor of economic development.
